How to run the project

For this project, I have used Facenet. Below are the instructions for running the software:

1. From command prompt, **cd** to "codes\src"

2. Run "main.py" file:

```
python main.py
```

3. There are two modes:

    - For running with test images, click on "Test with test images" button. Then, for showing image click on "Next" button

    - For running with webcam-captured image, click on "Test with webcam" button
